

Exclaimer provides a suite of powerful tools to extend the functionality of your email system.

With Exclaimer you can add disclaimers and signatures, stop unwanted or spam email, set up auto-replies and out-of-office responses, block email between selected groups of users and monitor and archive email. All of this is done by the server so there is nothing to configure on your client machines.

A very simple yet extremely powerful rule-based system allows you to change the way each email is handled depending on the sender and recipient.

Exclaimer is easy to install and configure, developed and supported by a team of Exchange professionals.

In use around the world by companies with as few as five users, to major household names with tens of thousands of users, Exclaimer has proved to be a highly scalable and reliable solution.

A suite of powerful tools to extend the functionality of your Microsoft Exchange Server.

Key Features

-  Add Disclaimers & Signatures
-  Anti-Spam Technology
-  Auto Responding
-  Mail Blocking & Redirection
-  Mail Monitoring & Archiving

Email Branding

- Extend your corporate communication standards to email
- Send emails with centralized company logos, brands and imagery

Email Signatures

- Add personal signatures with fields from the Active Directory

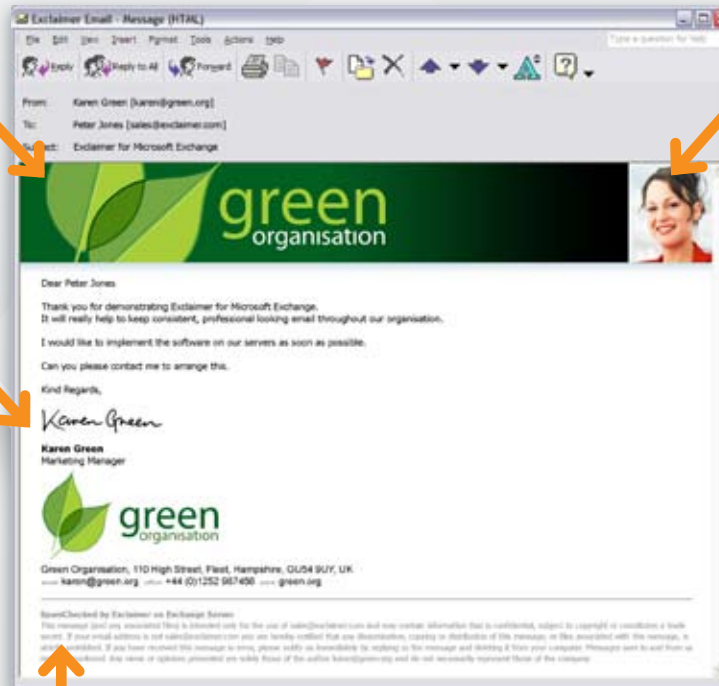

Auto Responding

Exclaimer can be used to set up automatic server-based replies to emails. These can be simple out-of-office notifications or automated replies to email queries, complete with file attachments and full HTML formatting. Key features include:

- Add the original email to the reply, either in the body or as an attachment
- Add other recipients to both the incoming and auto-response emails
- Loop detection and prevention
- Full integration with Exclaimer's powerful rule system ensures total flexibility

Mail Monitoring

- Monitor incoming, outgoing or internal mail
- Monitor or archive to public folder or to specified SMTP addresses

Email Disclaiming

- Disclaim emails internally and externally
- Supports HTML, Rich Text and Plain Text formats
- Use the graphical editor to design your templates
- Write your own HTML source code for complete control
- Add or exclude disclaimers using simple, powerful rule based system

AD Pictures

- AD Pictures is a utility to allow you to add images to the records in your Active Directory
- Create and manage images for all the objects in your Active Directory
- Import images from a variety of graphical file formats or even direct from a camera or scanner
- Export images from your AD to use in other applications
- Enhance your emails with sender based pictures or scanned signatures using Exclaimer's extensive Branding and Signature capabilities

Anti Spam

- Server based Anti Spam to cover all mailbox users
- Private Black and White Lists
- Wizard Driven Rollout
- False-positive errors are kept to an absolute minimum
- Remains highly effective over time
- Requires minimal user maintenance
